

Handling your NFT Gold Plate

Gold is one of nature's most extraordinary elements

It is beautiful and does not tarnish or decay, and will shine for thousands of years regardless of whether you store it in a vault or ship at the bottom of the sea. Gold has unique properties that make it discernible from other metals by assessing the lustrous look and feeling the weight.

You will note that pure 24 karat gold is considered soft yet holds the fine edges and details of laser etching beautifully. Ordering your pure gold plate engraved with your NFT image will make it special, valuable, and a unique art piece just for you.

Maintenance

Avoid engaging in any activity that could lead to scratches and dents in the plates without a protective covering being in place. Also avoid allowing your gold plates to touch each other as they can scratch one another.

Storage

The best way to preserve your gold plate and prevent scratching, is to ensure you are storing it separately from other items and in its original pouch or in a frame. Additionally, use gloves or clean hands when holding the minted Gold NFT plates.

Care

Should you wish to have your gold plate professionally cleaned and polished, please locate a local jeweler who is trusted to properly handle and care for gold.
